Drew Ripberger

(513)-413-3443 | ripberger.8@osu.edu | linkedin.com/in/drewrip | github.com/drewrip

Education

The Ohio State University — Columbus, OH
Bachelors of Science in Computer Science and Engineering; GPA: 3.94 — *Aug. 2020 – Expected May 2024*

Experience

IsoDiff Research Group — Jan. 2019 – Present
The Ohio State University — *Columbus, OH*

- Explored ways to group and characterize cycles from a serialization graph
- Tested and collected data on accounting applications so the violations of their isolation level could be found
- Created a front-end tool with Python and D3.js for the IsoDiff tool to assist users in identifying problematic SQL statements they are executing

Software Engineering Intern — Mar. 2020 – Aug. 2020
Nirmata — *San Jose, CA (remote)*

- Worked to help develop observability solutions to supply data upstream to Nirmata's Kubernetes management dashboard
- Used Go, eBPF and the Kubernetes API to construct a DaemonSet that monitors a cluster's network
- Presented the project's progress to the CEO, CTO and VP of Engineering as well as wrote an announcement blog post for the project
- Spoke at KubeCon + CloudNativeCon North America 2020 about my work developing kube-netc and entering the Kubernetes space: "A High-Schooler's Guide to Kubernetes Network Observability"

Summer Research Intern — Apr. 2021 – Aug. 2021
HyperThought Group at Ohio State — *Columbus, OH (remote)*

- Researched and explored methods to structure metadata from electron microscopy images
- Collaborated with the Air Force Research labs to interface and upload images and metadata onto the HyperThought system for further analysis and identification
- Assisted in writing and editing an extended abstract and talk for Microscopy & MicroAnalysis 2021 on how HyperThought can help doing large scale analysis of microscopy data

Projects

kube-netc | *Go, Docker, Prometheus, Kubernetes, eBPF, TravisCI* — Mar. 2020 – Present

- An open source network observability tool for tracking network statistics across Kubernetes clusters
- Utilized eBPF to pull raw networking data from Linux containers
- Created Go libraries to process and expose the networking data as Prometheus metrics
- Was the focus of my 6 month internship at Nirmata
- The source code may be found on the GitHub repository: https://github.com/nirmata/kube-netc

Dinghy | *Go, SQLite, R, LaTeX, gnuplot* — Nov. 2018 – May 2019

- Proposed a method to allow Raft clusters to better horizontally scale
- Wrote and ran tests in Go to assess Dinghy's effectiveness
- Analyzed and plotted the results of the tests in R and gnuplot to prove Dinghy's efficacy
- Won the UC Presidential Scholarship at the University of Cincinnati Science and Engineering Fair
- The source code and paper may be found on the GitHub repository: https://github.com/drewrip/dinghy

Technical Skills

Languages: Go, C/C++, Java, LaTeX, JavaScript, SQL, Python
Developer Tools: Git, Docker, TravisCI, Kubernetes
Frameworks & Systems: eBPF, Linux, Prometheus
